

A photograph of two business analysts in a light blue shirt and a white shirt. The analyst in the white shirt is pointing with a white pen at a computer monitor. The monitor displays several data visualizations: a line chart at the top showing trends over time, a pie chart on the left showing a distribution with a 26% segment, and a bar chart on the right showing a distribution of values. The background is a bright, modern office setting.

Dploy Solutions Business Analytics

Know what really drives your business

Put the power of analytics to work
in your business

Integrate and warehouse all data that
impacts business performance

- KPIs
- Financial data
- HR data
- Other data from internal and external sources
(ERP, CRM, QMS, factory floor data, etc.)

Analyze relationships between KPIs and
other business factors

- Learn what drives KPIs
- See relationships between KPIs, financial
performance, HR data, and more

Manage insights

- Users receive job-specific insights on a
customized, intuitive user interface
- Perform customized analytical scenarios
- View data in meaningful ways
- Make informed decisions that drive business
forward

Track business actions taken based on
those insights

- Create and manage action plans
- Set alerts and detect anomalies

Go beyond knowing what's happening in
your business. Get down to the details of why.

By incorporating embedded analytics, the Dploy Solutions suite of Business Process Management (BPM) software takes business insight to a whole new level. Business leaders not only see what's happening in their business, they now have access to the information they need to understand why it's happening and what they can do to address performance problems or build on performance successes.

Using drill down analysis capabilities, you can understand the specific factors related to a business hit or miss. You can visualize the relationships between those factors and your KPIs. And you can see how KPIs, production data, and other business metrics—such as financial performance and human resources—interconnect. With this deeper level of knowledge about how and why your business runs the way it does, you'll be positioned to more quickly identify and resolve performance problems and optimize wins, giving your business the edge it needs to compete at a higher level.

Embrace the future of business intelligence today.

The diagnostic analytics capabilities embedded in Dploy Solutions—the ability to understand the whys behind the what—is the first step toward the next generation of business intelligence. These features can help your business set the stage for predictive and prescriptive insights that can help optimize strategic business decisions and, eventually, pave the way to machine learning and AI.

Key Features

Adding embedded analytics capabilities to your Dploy Solutions software makes critical business insight available to decisions makers and employees all across your organization. With this information, the organization becomes smarter, faster, and more in tune with its performance story. And your people are able to take the necessary actions to drive increased and sustained levels of performance success.

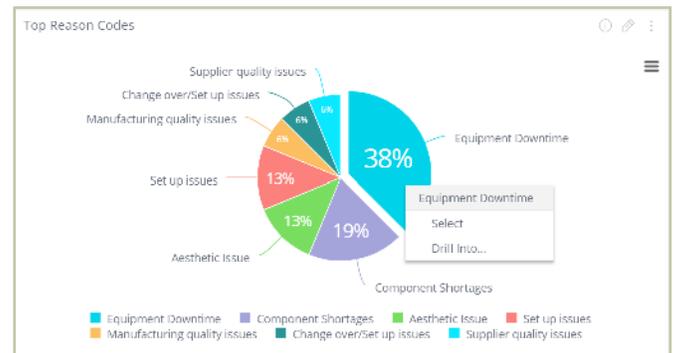

EASY-TO-USE DATA ANALYTICS ENGINE FOR BUSINESS USERS

No longer are analytics the exclusive domain of data scientists. The embedded analytics capabilities in Dploy Solutions make it possible for employees at all levels to take advantage of the power of deep business insight. Thanks to an intuitive, customizable user interface, people in different roles throughout the organization can see the data and relationships that impact their everyday processes, workflows, and business issues. They can make smarter decisions, act faster, and contribute to improvements that advance the business' overall performance goals.

ANALYTICS AND INSIGHTS BEYOND YOUR DASHBOARD

Seeing what's happening in your business is essential to success. But knowing why it's happening is a game changer. Users can drill down into the various factors that drive KPIs or other business metrics to see how those factors contribute to hits and misses. Once employees understand the root causes behind performance issues, they can use Dploy Solutions' capabilities to create and track action plans for resolving problems or leveraging successes. Your team can set alerts to detect anomalies and create advance notice of potential future performance issues, so employees can take action and resolve issues before another critical miss occurs.

EXTERNAL BUSINESS METRICS

With the embedded analytics features in Dploy Solutions, it's possible to understand the relationships between KPIs and other critical areas of the business. You can see what's driving your organization's financial results and how KPI progress affects the top and bottom lines. This extended visibility opens up new windows into uncovered opportunities that can drive further process improvements and unprecedented business growth.

Getting Started with Embedded Analytics

Technological advances are making it easier than ever for people at all levels of the business to better understand and contribute to higher levels of operational and organizational performance. The experts at Dploy Solutions can partner with you to seamlessly integrate and leverage these capabilities and put them to work in ways that will best support your specific business goals.

Data Integration

Dploy Solutions consultants will work with your business leaders to identify the specific data you need and determine where it exists. Whether housed internally or externally, our technical team determines the optimal ways to integrate the data you need from various sources, and filter out the data you don't. Employees at all levels can stay focused on what they need to succeed in their roles and contribute to overall business performance.

Data Warehousing

The embedded analytics capabilities are configured to host data from all of your critical business systems in a central repository. This makes it easy and seamless to aggregate, manage, and analyze the various data you need to optimize your business performance. From one central spot, users can drag and drop data to enable analysis and show the relationships between factors.

Analytics and Visualization Design Services

The team at Dploy Solutions delivers both the operational know-how and the technical and analytics expertise to design the optimal analytics solution for your business. Dploy Solutions consultants and data experts work with stakeholders and users at various levels to determine specific data visualization needs for individual jobs functions, roles, and scenarios. We help you define the insights you're looking to uncover. And then we design the analytics engine and dashboards to perform the needed analytical scenarios and deliver information in meaningful ways.

Whether supporting your internal data scientists or serving as your data team, our services are flexible enough to uniquely fit your needs. At Dploy Solutions, our goal is to ensure businesses of all sizes can benefit from the power of today's analytics solutions to understand the impact of various factors on business performance.

STRATEGY DEPLOYMENT

Achieve breakthrough objectives faster with strategy execution tools.

The ability to connect people at all levels to the company's overall mission is the fastest way to strategic success. Our Strategy Deployment software aligns the daily efforts of everyone in your organization to your long-term business strategy. With Dploy Solutions, you create a culture where everyone actively strives for process improvements, creating sustainable value for the business.

KPI MANAGEMENT

Measure what matters.

The health of your business depends on everyone focusing on the organization's critical key performance indicators and meeting goals tied to those KPIs. With the Dploy Solutions KPI Management software, the entire team uses robust tools for KPI tracking, identifying missed targets, and taking appropriate actions to stay on track every shift, every hour. Everyone is accountable for driving measurable results daily and, ultimately, winning the year.

PROJECT MANAGEMENT

Drive rapid and continuous improvement.

Creating real-time visibility into key continuous improvement initiatives helps you reach strategic goals faster. Getting the job done starts with a Project Management software that empowers people to effectively complete projects on time, while keeping them connected to the KPI metrics that enable overall operational goals. Everyone keeps an eye on the end goal, and people know what to do, and when to do it, to ensure project success.

About Dploy Solutions

Dploy Solutions, offered by TBM Consulting Group, is a modular, cloud-based suite of operational excellence capabilities designed to enable effective operations management. The Dploy Solutions suite automates process rigor for strategy deployment, KPI management, and project management to help you achieve sustainable performance improvements of up to 15%. Dploy Solutions is perfect for organizations that need to manage complex, large footprint operations and can be used in manufacturing, distribution, or service organizations.

About Sisense

Dploy Solutions partners with the pioneers in embedded analytics technology, Sisense, to help companies stay on track with critical performance metrics and the overall health of their business. The Sisense analytics platform creates insights that are accessible to everyone, everywhere, regardless of technical and data expertise. Through the Sisense partnership, Dploy Solutions makes it possible for your business to leverage the power of analytics to take business performance to an entirely new level.
